Requirements:

ISS MMS (Diving or Synchro)
Omega DV Scoring Manager
Omega SY Scoring Manager
Run Event (Diving only)
Networked computers

Networking your computers:

This is your challenge. A good way to convince yourself computers are properly networked, try the following: From one PC, open the shared folder on the second PC, now create a new text document, add some text and save it. If it works, you are properly networked.
Note: A stand-alone version of Run Event is available for diving.

Run Event is typically installed in "c:_dive\run event".
Event files (*.evt) are typically loaded into the run event folder for easy scoring of your event.
The event file folder must be shared on your network and accessible from the computer running Display Results.

Synchro: From the Competition menu, select "Copy Standings.txt location to the clipboard". Paste this location in Display Results.
Diving: From the Run Event Function menu, select "Copy Standing.txt location to the clipboard". Paste this location in Display Results.

Comment: Whenever we enter scores for an event, a standings file is generated. Display Results uses the standings file to display the event in progress.

Basic use – Facility display

Facility display on a projector or TV: There are 2 options;
1) Network your computers
2) Extend the screen of your scoring computer.
Options menu:
       Choose your sport
       Set your display language
Tabs:
       Specify font color, size and background.
       Specify screen size and location.
       Specify a background image (optional).

There are many functions of Display Results most of which are not available with the free version.

Diving

If you have a Calypso discreet digit scoreboard, you can connect directly from Run Event.
